

Booklet 7: Reflective Swarms and Emergent Cognition

Abstract

This booklet introduces the architecture and operational logic of reflective capsules and autonomous swarms within the RSCS-Q cognitive substrate. It bridges symbolic autonomy (Booklet 6) and the beginnings of self-modeling (Booklet 8), providing the mechanism for recursive self-adjustment, exploratory adaptation, and emergent validation through capsule fingerprinting, drift lineage, and swarm collaboration. It extends the CapsuleMatrix model and integrates the lineage system, drift classification, and swarm-based reflective reasoning.

Table of Contents

1. Introduction

- 1.1. From Mission Kernel to Reflective Autonomy
- 1.2. Goals of the Reflective Swarm Layer

2. Reflective Capsule Foundations

- 2.1. CapsuleMatrix Recap
- 2.2. Fingerprinting and Signature Matching
- 2.3. Capsule Drift Classification (Rubric, Execution, Outcome, Signal, Meta)
- 2.4. Drift Response Policies: Strict, Adaptive, Escalate, Archive

3. Capsule Lineage Architecture

- 3.1. Parent-Child Imprint System
- 3.2. Hereditary Capsule IDs and Trait Inheritance
- 3.3. Genealogy Trees and Recursive Monitoring Settings
- 3.4. Failure Flagging and Discovery Cascades

4. Autonomous Swarm Design

- 4.1. Swarm Archetypes: Researcher, Auditor, Discoverer, Synthesizer
- 4.2. Autonomous Launch Conditions (Drift Triggers, Rubric Divergence)
- 4.3. Reflective Communication Between Capsules (Ping, Compare, Alert)
- 4.4. Capsule-Swarm Interlink Protocol

5. Pattern Discovery and Comparative Reasoning

- 5.1. Dynamic Capsule Categorization and Sub-Feature Classification
- 5.2. Internal/External Pattern Matching Engines
- 5.3. Comparative Drift Mapping and Local Similarity Scores
- 5.4. Signature-Based Memory Fusion

6. Reflective Matrix Engine

- 6.1. Matrix Drift Scanning
- 6.2. Emergent Validity Index (EVI)
- 6.3. Matrix Discovery Score (MDS)
- 6.4. Capsule Drift Forecast Graphs

7. Reflective DSL Extensions

- 7.1. `if capsule_family_drift(...)`
- 7.2. `trigger_reflective_response(...)`
- 7.3. `compare_fingerprint(c1, c2)`
- 7.4. `check_lineage_trajectory(...)`

8. Governance and Containment Logic

- 8.1. Guardrails for Recursive Capsule Spawning
- 8.2. Throttling and Decay for Overactive Swarms
- 8.3. Human-in-the-Loop Overrides
- 8.4. Ethical Filters for Reflective Autonomy

9. Conclusion and Next Steps

- 9.1. Interface to Meta-Kernel (Booklet 8)
 - 9.2. Challenges in Reflective Scaling
 - 9.3. Outlook for Evolving Self-Models
-

Appendices

- Appendix A: Drift Type Classifier Matrix
- Appendix B: Capsule Lineage Graph Examples
- Appendix C: DSL Predicate Usage Examples
- Appendix D: Sample EVI/MDS Output Charts
